

Sword Venture and Sword DataCo Integration from April 1st 2020

Following the recent acquisition by the Sword Group of DataCo, Sword Venture and Sword DataCo will be merging to form a single entity that will specialise in Energy sector data services and solutions. The combined organisation will be known as Sword Venture from April 1st 2020. This is a natural progression that builds on the excellent working relations we have fostered since joining forces last year.

With a combined workforce of over 120 data and information management professionals, Sword Venture brings unparalleled expertise in maximising the value of Oil and Gas data and information assets for our customers, via capabilities such as:

- Digital Solutions and Transformation development and deployment
- Asset Acquisition and Divestment Services
- Embedded personnel and technology managed services in support of daily operations.
- Consultancy

Sword Venture and DataCo have both invested in data science and analytical capabilities in recent years, bringing these two teams together as the Sword Venture Digital Solutions Factory will provide our customers with class-leading technology. The Factory comprises of an in-house R&D department and a commercial analytics delivery team, with the goal of solving common Oil and Gas industry problems across the technical and corporate domains. Our blend of technical data scientists and data domain subject matter experts form agile delivery groups that deliver practical value to our customers.

We focus on delivering solutions that enable insights and inform business decisions, through the application of data science and analytical techniques. Our solutions are proven to help reduce time, cost and risk, and improve insight and efficiency in operational decisions. For example, in a complex data migration triggered by organisational change such as an asset transfer, we bring an independent lens to the discovery, access and use of data. We ensure the vendor extracts only the information relevant to that asset and that the new owner is armed with the data, information and licenses needed to deliver seamless operational production from Day One of ownership.

As part of Sword Group, we also have access to IT, visualisation, and digital workplace expertise to help build solid technology foundations that are designed to enable successful digital transformation and embed intelligent data solutions.

We have the joint ambition to firmly establish ourselves as the leading global provider of data and information management expertise and service support to

the Energy sector. Building on our existing global footprint from Sword Venture (with offices in London and Aberdeen) and Sword DataCo (with offices in Aberdeen, The Hague and Perth, Australia), we are actively looking to expand our presence in locations that include Houston, the Middle East, and South East Asia.

We are confident that this integration will enhance the service we provide to our customers today, as well as help us to shape the next decade of data management in the Energy sector together.
